## ACLOUD Flight \#14 - Polar 6-170608

## Mission PI P6: Emma Järvinen

Objectives: Co-located flight with P5: satellite overpass and vertical cloud profile over Polarstern.

Crew:

| Polar 6 |  |
| :--- | :--- |
| PI | Emma Järvinen |
| Basis Data Acq. | Daniel Damaske |
| PMS | Delphine Leroy |
| Alabama | Hans Clemen |
| CVI | Udo Kästner |
| A + TG | Heiko Bozem |
| Nevzorov | Dmitry Chechin |

## Flight times:

| Polar 6 |  |
| :--- | :--- |
| Take off | $9: 30$ |
| Touch down | $15: 12$ |

## Weather situation as observed during the flight (compare to forecast):

The weather forecast predicted slow wind speeds and a layer of broken low clouds in the west and north of the archipelago. The mid- and high-level clouds were predicted to have cleared from the past days. As predicted, low-level clouds were found from Ny Ålesund to Polarstern with only occasional mid- and high-level clouds. The cloud deck was found to be solid until few tens of nautical miles before Polarstern and near Polarstern only a weak and broken cloud layer were observed. Towards the afternoon, the clouds cleared over the open sea.

## Overview:

Polar 6 (P6) started before the Polar 5 (P5) and headed towards Ny Ålesund and C1 at an altitude of 4000 ft . The cloud deck began 10 minutes before arriving to Ny Ålesund and to avoid flying in the clouds above terrain, P6 ascended to 4500 ft . Although the first saw tooth pattern was planned to start at C1, it was decided to probe the clouds over the open ocean 10 minutes after passing Ny Ålesund. Before arriving to C1, P6 did one decent through clouds with $200 \mathrm{ft} / \mathrm{min}$. The cloud top was found at 4400 ft and cloud base at 1000 ft . Temperatures were few degree in positive, which resulted in all-liquid cloud phase.

At C1 the P5 was approximately 10 minutes behind, so while waiting to be co-located P6 decided to perform a race track with 2 minute legs at C1. The levels probed were 1800 ft (cloud base at 1700 ft ), $2500 \mathrm{ft}, 3000 \mathrm{ft}$ and 3400 ft . The cloud was found to consist of multiple layers and the level

Ice edge seen below the cloud layer.

3000 ft was located in between cloud layers. Temperatures were $+2^{\circ} \mathrm{C}$ and the cloud composed of $\sim 10 \mu \mathrm{~m}$ droplets. After the race track P6 and P5 co-located and headed towards C2 at 10:59 - one minute later than planned.

Between waypoints C1 and C2 P6 flew saw tooth pattern. The first descent was with $400 \mathrm{ft} / \mathrm{min}$ and the cloud top and base were at 3900 ft and 2600 ft , respectively. Below the cloud base were thin lower clouds approximately at 700 ft . P6 continued to descent to 200 ft . Below the cloud base P6 sampled boundary layer. The ice edge was crossed before the next saw tooth ascent. The next saw tooth pattern was performed over sea ice. The cloud base was at 700 ft and top at 1400 ft . Within this penetration also ice crystals were observed at temperatures around $-3^{\circ} \mathrm{C}$. The clouds above the sea ice were colder than above open ocean but this day the strong inversion layer was missing.

Patchy clouds near Polarstern. Temperatures above the cloud top were around $1.5^{\circ} \mathrm{C}$. During the next attempt to descent through the cloud the pito-tube started vibrating and the pilots pulled the P6 back up. The reason for the vibration was icing on the pito-tube structures. Altogether 6 minutes were spent above the cloud top to get rid of the ice. During this time, the satellite overpass was missed. After de-icing one more saw tooth descent and ascent were made, which resulted into increasing buildup of ice on aircraft structures and cloud probes. To avoid unnecessary icing the saw tooth pattern was stopped and way to Polarstern was made in clear air at 1200 ft .

At Polarstern the clouds were broken and thin, so instead of performing a cloud race track near Polarstern we performed an aerosol race track with 1-minute legs and constant ascent with 800 $\mathrm{ft} / \mathrm{min}$. The race track started at 200 ft and ended at 12000 ft . After sampling the ceiling altitude 3 minutes, P6 headed towards C1 with a constant ascent.

The cloud deck turned more solid in between Polarstern and C1 and the solid cloud layer offered the change to perform the cloud race track near C2. The cloud top was observed to be at 1400 ft and the cloud base was located at 400 ft . The race track was performed as 8minute legs with first leg below the cloud base (200 ft), the second at 600 ft and the third at 800 ft . During the third leg, the vibrations in the pito-tube occurred again and weren't avoided even after de-icing above the cloud deck. To avoid damaging the pito-tube the cloud profile was stopped and the coordinates were set to LYR. On the way back P6 sampled the vertical distribution of aerosol by ascending to 12000 ft and maintaining that level for 2 minutes before descending to 8000 ft . At 8000 ft a calibration pattern for the AIMS was performed with jaws at different speeds and circles with different banks.

Solid cloud deck started before C2.

## Flight track and pattern:

## Detailed Flight Logs:

All times are in local time.

| 9:30 | Take off <br> - 4000 ft and 140 kn towards Ny Ålesund |
| :---: | :---: |
| 9:48 | Cloud deck begins |
| 9:51 | Ascent to 4500 ft to avoid clouds <br> - some mid-level clouds in sight |
| 9:57 | Ny Ålesund <br> - cloud top almost at 4500 ft |
| 9:59 | To 4600 ft |
| 10:01 | Patchy mid-level clouds above |
|  | Saw Tooth Profile in Clouds |
| 10:05 | Saw tooth $\downarrow 300 \mathrm{ft} / \mathrm{min}$ <br> - Cloud top at $4400 \mathrm{ft}\left(+2^{\circ} \mathrm{C}\right)$ <br> - mid-level clouds were above |
| 10:10 | Change to $500 \mathrm{ft} / \mathrm{min}$ |
| 10:14 | Cloud base at 1000 ft |
| 10:14 | At 500 ft <br> - no precipitation |
|  | C1 Cloud Race Track (2 min legs) |
| 10:18 | Climbing to cloud level with $500 \mathrm{ft} / \mathrm{min}$ |
| 10:21 | Cloud base at 1700 ft |
| 10:21 | Level 1800 ft |
| 10:25 | Right turn, climb to 2500 ft |
| 11:26 | Level 2500 ft <br> - small droplets around $10 \mu \mathrm{~m}$ |
| 10:29 | Right turn, climbing to 3000 ft |

| 10:30 | Level 3000 ft <br> - Between cloud layers |
| :---: | :---: |
| 10:32 | Level 3400 ft (without turn) |
| 10:33 | Back in cloud <br> - Cloud droplets small, around $10 \mu \mathrm{~m}$ |
| 10:35 | C1: Climb out of the cloud |
|  | Saw Tooth Profile |
| 10:36 | Above the clouds at 4000 ft <br> - Some mid-level cloud right above |
| 10:41 | Saw tooth $\downarrow 400 \mathrm{ft} / \mathrm{min}$ <br> - Cloud top at 3900 ft |
| 10:44 | Cloud base at 2600 ft <br> - Some lower thin clouds ahead $\left(+4^{\circ} \mathrm{C}\right)$ |
| 10:47 | Top of the boundary layer at 1500 ft |
| 10:49 | Thin cloud layer at 700 ft |
| 10:51 | At 200 ft <br> - Ice edge ahead |
| 10:55 | Saw tooth $\uparrow 200 \mathrm{ft} / \mathrm{min}$ |
| 10:57 | Cloud base at 700 ft <br> - Ice crystals, needles at $-3^{\circ} \mathrm{C}$ <br> - Droplet sizes around $18 \mu \mathrm{~m}$ |
| 11:01 | Cloud top at 1400 ft <br> - No ice at the top <br> - Temperature in the inversion layer $1.5^{\circ} \mathrm{C}$ |
| 11:05 | Saw tooth $\downarrow 200 \mathrm{ft} / \mathrm{min}$ <br> - Cloud top at $1500 \mathrm{ft}\left(-4^{\circ} \mathrm{C}\right)$ <br> - Big droplets around $25 \mu \mathrm{~m}$ |
| 11:09 | Back up due to vibrations <br> - De-icing at $2200 \mathrm{ft}\left(1^{\circ} \mathrm{C}\right)$ |
| 11:15 | Saw tooth $\downarrow 200 \mathrm{ft} / \mathrm{min}$ <br> - Cloud top at $1300 \mathrm{ft}\left(-4.8^{\circ} \mathrm{C}\right)$ |
| 11:21 | Some ice crystals |
| 11:22 | Cloud base at 700 ft <br> - Some precipitation ice but also droplets -> cloud base not clear |
| 11:30 | C3 |
| 11:31 | Saw tooth $\uparrow 200 \mathrm{ft} / \mathrm{min}$ <br> - Cloud base at 250 ft |
| 11:36 | Cloud top at 1300 ft <br> - No ice in the cloud top <br> - Clouds start to form patchy |
| 11:43 | End of saw tooth, heading to Polarstern at 1200 ft |
| 11:57 | Descent to Polarstern -> only thin and patchy clouds |
|  | PS Aerosol Race Track |
| 12:14 | Start race track at 100 ft |
| 12:19 | PS plume |
| 12:32 | 12000 ft |
| 12:35 | Head to C1 |
| 12:40 | Start descent |
|  | Solid cloud deck ahead that ends to sea ice border |

|  | Cloud Race Track, 8 min legs |
| :---: | :---: |
| 13:01 | Cloud top at 1400 ft |
| 13:03 | Cloud base at 400 ft |
| 13:04-13:10 | Level 200 ft <br> - No precipitation |
| 13:10 | Turn near ice edge -> clouds getting thinner |
| 13:15-13:23 | Level 600 ft <br> - Small droplets around $10 \mu \mathrm{~m}$ <br> - Cloud base lowered towards end of the leg |
| 13:23 | Turn and climb to 800 ft |
| 13:24 | Level 800 ft <br> - Only liquid at $-4^{\circ} \mathrm{C}$ |
| 13:25 | Out of cloud due to vibrations |
| 13:35-13:40 | Level 800 ft |
| 13:40 | Stop race track due to vibrations |
| 14:06 | Level 12000 ft |
| 14:08 | Level 8000 ft |
|  | AIMS Calibration |
| 14:14 | Jaws 100 kn |
| 14:15 | Jaws 120 kn |
| 14:17 | Jaws 140 kn |
| 14:18 | Jaws 160 kn |
| 14:19 | Bank 160 kn |
| 14:22 | Jaws 160 kn |
| 14:23 | Jaws 140 kn |
| 14:24 | Jaws 120 kn |
| 14:26 | Jaws 100 kn |
| 14:28 | $360^{\circ}$ turn, $15^{\circ}$ bank, right turn |
| 14:31 | $360^{\circ}$ turn, $30^{\circ}$ bank, right turn |
| 14:33 | $360^{\circ}$ turn, $45^{\circ}$ bank, right turn |
| 14:35 | $360^{\circ}$ turn, $15^{\circ}$ bank, left turn |
| 14:38 | $360^{\circ}$ turn, $30^{\circ}$ bank, left turn |
| 14:40 | $360^{\circ}$ turn, $45^{\circ}$ bank, left turn |
| 14:43 | Head to LYR |
| 15:12 | TOUCH DOWN |
