In this seminar we will go through the various stages of designing and carrying out neuropsychological experiments. By the end of the course, students will have designed and programmed an experiment, acquired data, and finally analysed and interpreted their results. The seminar will include lectures as well as hands-on sessions. The seminar is open for everyone: specific prior experience is not required.

The sessions will be held at the Max Planck institute for Human Cognitive and Brain Sciences, Stephanstraße 1A, Leipzig.  
Course instructors: Dr Tomás Goucha and Stan van der Burght
