

# How to linearize weight?

Jochen Trommer & Eva Zimmermann (University of Leipzig)

UC Santa Cruz: Phlunch

February 22, 2013

# Major Theories of Affix Linearization

## Phonological Dislocation theories

**Horwood (2002):** Affixes are prefixes or suffixes to the base, but may infix under the pressure of phonological constraints

## Morphological pivot affixation

**Yu (2007):** Affixes are prefixes or suffixes to specific (possibly internal) base positions ('pivots') and cannot be dislocated by phonological processes

# Tagalog *um*-Infixation

	BASE	ACTOR FOCUS	
(1)	abot	<b>um</b> abot	‘reach for, pf.’
	tawag	<b>tum</b> aawag	‘call, pf.’

# Infixation as Affixation+Phonological Dislocation (Horwood 2002)

(2) um ↔ — Base [

(3) *V-initial Base*

um-abot	NoCODA	LIN- $\mu$
☞ a. <b>u.m</b> a.bot	*	
b. a. <b>um</b> .bot	**!	*
c. a. <b>bu</b> .mot	*	*!*

(4) *C-initial Base*

um-tawag	NoCODA	LIN- $\mu$
a. <b>um</b> .ta.wag	**!	
☞ b. <b>tu.m</b> a.wag	*	*
c. ta. <b>um</b> .wag	**!	**

# Infixation as Pivot Affixation (Yu 2007)

(5) um  $\leftrightarrow$  Base[ . . . — V

# Possible pivots for affixation (Yu 2007)

(6)

a. **Initial pivot**

- (i) First consonant/onset
- (ii) First vowel/nucleus
- (iii) First syllable

b. **Final pivot**

- (i) Final vowel/nucleus
- (ii) Final syllable

c. **Prominence pivot**

- (i) Stressed syllable
- (ii) Stressed vowel/nucleus

## Mora affixation

(7) *Emphatic adjectives in Shizuoka Japanese*

(Davis&amp;Ueda 2006)

	ADJECTIVE	EMPHATIC FORM			
a.	katai	kattai	‘hard’		
	osoi	ossoi	‘slow’	CV.C̣...	⇒ CV.C̣ː...
	takai	takkai	‘high’		
b.	hade	hande	‘showy’		
	ozoi	onzoi	‘terrible’	CV.C̣...	⇒ CVN.C̣...
	nagai	naɲgai	‘long’		
c.	zonzai	zoːnzai	‘impolite’		
	suppai	suːppai	‘sour’	CVC.C...	⇒ CVːC.C...
	okkanai	oːkkanai	‘scary’		

# Central Question of this Talk

**How are  $\mu$ -affixes linearized?**

# Our claim

➤  **$\mu$ -affixation is pivot affixation**

## 1. Introduction

## 2. A typology of mora affixation

## 3. Against phonological $\mu$ -dislocation

### 3.1 Lack of non-local infixation

### 3.2 Coexistence of $\mu$ -affixes

### 3.3 Lack of Variable Infixation

### 3.4 Cases of Fixed Infixation: Shizuoka Japanese

## 4. Conclusion

# A typology of mora affixation

# Morphological $\mu$ 's

## I. A $\mu$ as morpheme

(8) *Gidabal* (Geytenbeek&Geytenbeek 1971, Kenstowicz&Kisseberth 1977)

BASE		IMPERATIVE
gida	'to tell'	gida:
ma	'to put'	ma:

## II. A $\mu$ is part of a morpheme

(9) *Plural suffix /-weʔ/ in Zuni* (Newman 1965, Saba Kirchner 2007)

BASE		PLURAL
lupa	'box of ashes'	lupa:weʔ
homata	'juniper tree'	homata:weʔ

Realization of a  $\mu$ -affix

Vowel lengthening:	
Gemination:	
(Epenthesis:)	
(Reduplication:)	

# Empirical study: loci of $\mu$ -realization

- 25 cases of  $\mu$ -affixation in 21 languages

# Empirical study: loci of $\mu$ -realization

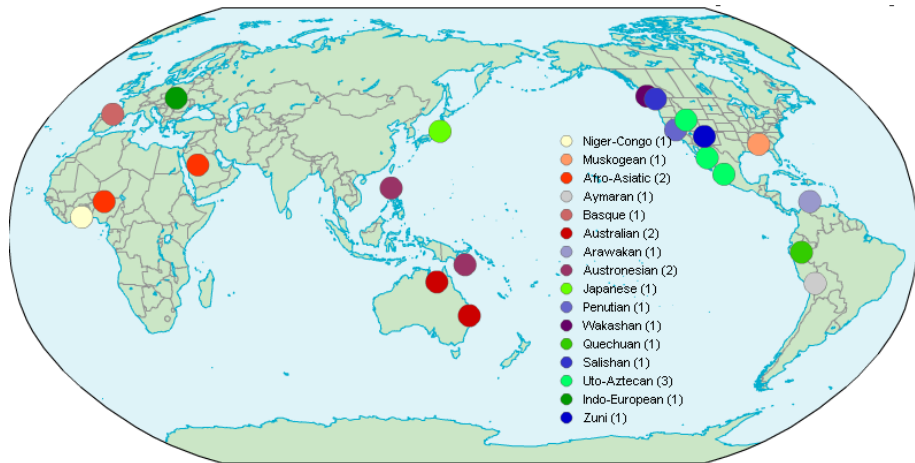

- 25 cases of  $\mu$ -affixation in 21 languages
- excludes:
  - cases of vowel-lengthening for monosyllabic bases (e.g. Western Nilotic)
  - patterns of templatic morphology
  - patterns where reduplication/epenthesis is the only exponent of a morpheme
  - the same  $\mu$ -affixation pattern in languages of the same language family

Language	(classification according to AUTOTYP)		
	Stock	Area	Continent
Saanich	Salishan	Alaska-Oregon	WN America

# $\mu$ -affixation as Pivot Affixation

## Pivots for $\mu$ -affixation

- first/last  $\mu$
- first/last  $\sigma$

→ they describe all and only the possible landing sites for  $\mu$ -affixes

# Against phonological $\mu$ -dislocation

# Arguments against Phonological $\mu$ -Dislocation

- **Lack of non-local infixation**
- **Coexistence of  $\mu$ -affixes**
- **Lack of Variable Infixation**
- **Cases of Fixed Infixation**

# The general logic of $\mu$ -dislocation approaches

(14) *Long vowels in Gidabal*

$\mu$ + gida	*C:	LIN- $\mu$	*V:
☞ a. gi $\mu$ da [gi:da]			*
b. gid $\mu$ a [gid:a]	*!	*	

# The general logic of $\mu$ -dislocation approaches

## (14) *Long vowels in Gidabal*

$\mu$ + gida	*C:	LIN- $\mu$	*V:
☞ a. gi $\mu$ da [gi:da]			*
b. gid $\mu$ a [gid:a]	*!	*	

## (15) *Geminates in Shoshone*

$\mu$ + maka	*V:	LIN- $\mu$	*C:
a. ma $\mu$ ka [ma:ka]	*!		
☞ b. mak $\mu$ a [mak:a]		*	*

# Arguments against Phonological $\mu$ -Dislocation

- **Lack of non-local infixation**
- **Coexistence of  $\mu$ -affixes**
- **Lack of Variable Infixation**
- **Cases of Fixed Infixation**

# Lack of non-local infixation

- the pivots first/last  $\mu$ /first/last  $\sigma$  are sufficient to predict all attested cases of  $\mu$ -affixation

# Lack of non-local infixation

- the pivots first/last  $\mu$ /first/last  $\sigma$  are sufficient to predict all attested cases of  $\mu$ -affixation
- phonological disfixation accounts inherently predict non-local infixation

(16) *Non-local gemination in unattested Shoshone'*

BASE	$\mu$ -AFFIXED FORM
gadali	ga <b>d</b> :ali

## $\mu$ -Alignment in Davis & Ueda (2006:4)

(38) ALIGN-L( $\mu_e$ , Wd)

Align the emphatic mora with the beginning (left edge) of the word.

“In our analysis, the evaluation of the alignment constraint in (5) is with respect to the syllable so that if the emphatic mora ( $\mu_e$ ) is realized in the first syllable of the word then the constraint is satisfied; it is violated if it is realized beyond the first syllable.”

# Conclusion

- $\mu$ -affixation is pivot-affixation

# Conclusion

- $\mu$ -affixation is pivot-affixation
- the alternative of phonological dislocation

# Conclusion

- $\mu$ -affixation is pivot-affixation
- the alternative of phonological dislocation
  - predicts unattested instances of non-local infixation

# Conclusion

- $\mu$ -affixation is pivot-affixation
- the alternative of phonological dislocation
  - predicts unattested instances of non-local infixation
  - fails to predict instances of Fixed Infixation without additional (stipulated) machinery

# Conclusion

- $\mu$ -affixation is pivot-affixation
- the alternative of phonological dislocation
  - predicts unattested instances of non-local infixation
  - fails to predict instances of Fixed Infixation without additional (stipulated) machinery
  - fails to predict the coexistence of different  $\mu$ -affixation patterns in one language

# Conclusion

- $\mu$ -affixation is pivot-affixation
- the alternative of phonological dislocation
  - predicts unattested instances of non-local infixation
  - fails to predict instances of Fixed Infixation without additional (stipulated) machinery
  - fails to predict the coexistence of different  $\mu$ -affixation patterns in one language
  - predicts unattested instances of variable  $\mu$ -infixation

## 1. Introduction

## 2. A typology of mora affixation

## 3. Against phonological $\mu$ -dislocation

### 3.1 Lack of non-local infixation

### 3.2 Coexistence of $\mu$ -affixes

### 3.3 Lack of Variable Infixation

### 3.4 Cases of Fixed Infixation: Shizuoka Japanese

## 4. Conclusion
