

LIST OF POSTERS

- Reinforcement learning with a single microswimmer
Santiago Muiños Landin, Viktor Holubec, Frank Cichos
- Real-time single particle tracking and classification and tracking in optical microscopy with single shot convolutional neuronal networks
Nikkin Devaraju, Martin Fränzl, Frank Cichos
- A β 1-42 fibrils studied in a thermophoretic trap
Jan Frenzel, Tobias Thalheim, Martin Fränzl, Frank Cichos
- Simulating optical forces on nanoparticles
Felix H. Patzschke, Martin Fränzl, Frank Cichos
- Tracer-based measurement of microscopic thermo-osmotic flow fields
Nicola Söker, Frank Cichos
- Hot Brownian motion on short time scales
Xiaoya Su, Alexander Fischer, Klaus Kroy, Frank Cichos
- Absolute temperature measurement of gold nanoparticles
Fabian Welzel, Martin Fränzl, Frank Cichos
- O protons, where art thou? – Kinase inhibitors in lipid membranes with NOESY and more ...
Markus Fischer, Daniel Huster, Holger A. Scheidt
- Fibril dynamics by NMR relaxation and MD simulation
Albert A. Smith, Daniel Huster, Matthias Ernst, Sereina Riniker, Beat H. Meier
- Accelerating molecular dynamics simulations with population annealing
Henrik Christiansen, Martin Weigel, Wolfhard Janke
- Pearl-necklace-like local ordering drives polypeptide collapse
Suman Majumder, Ulrich H.E. Hansmann, Wolfhard Janke
- All-atom simulations of polymers on structured surfaces
Fabio Mueller, Henrik Christiansen, Wolfhard Janke
- Collapse dynamics of a flexible polymer with active beads
Subhajit Paul, Suman Majumder, Subir K. Das, Wolfhard Janke

- The physics of tumor–ECM interaction
Eliane Blauth, Frank Sauer, Steffen Grosser, Claudia T. Mierke, Josef A. Käs
- Investigation and controlled modulation of mixed cytoskeletal networks
Iman Elbalasy, Josef A. Käs, Jörg Schnauß
- Cytoskeletal dynamics during cancer cell migration in confined geometries
Carlotta Ficarella, Rebeca Martínez Vázquez, Paul Heine, Enrico Warmt, Roberto Osellame, Josef A. Käs
- Fluid and jammed behavior in cell spheroids
Steffen Grosser, Linda Oswald, Jürgen Lippoldt, Josef A. Käs
- Roadmap to local tumor growth
Hans Kubitschke, Benjamin Wolf, Erik Morawetz, Lars-Christian Horn, Bahriye Aktas, Ulrich Behn, Michael Höckel, Josef A. Käs
- Dynamics of cellular jamming
Jürgen Lippoldt, Steffen Grosser, Dimitrij Tschodu, Josef A. Käs
- Friction in isotropic polymer networks
Paul Mollenkopf, Jessica Lorenz, Martin Glaser, Josef A. Käs, David M. Smith, Jörg Schnauß
- Morphology of breast cancer cell aggregates in 3D matrices
Linda Oswald, Steffen Grosser, Jürgen Lippoldt, Josef A. Käs
- The physics of carcinomas: A multi-scale analysis on primary tumor tissues
Frank Sauer, Erik W. Morawetz, Steffen Grosser, Thomas Fuhs, Benjamin Wolf, Sonja Kallendrusch, Hans Kubitschke, Hannah-Marie Scholz-Marggraf, Jürgen Lippoldt, Mareike Zink, Ingo Bechmann, Susanne Briest, Lars-Christian Horn, Bahriye Aktas, Josef A. Käs
- Classification of breast cancer and peripheral blood mononuclear cells by machine learning mechanical parameters
Dimitrij Tschodu, Ivonne Nel, Erik W. Morawetz, Josef A. Käs, Bahriye Aktas
- Molecular markers for breast cancer and jamming in MDA-MB-436 cancer cell line
Pamela Yaninska, Steffen Grosser, Erik Morawetz, Josef A. Käs
- Crystallization of poly(ϵ -caprolactone) at the air–water interface studied by IRRAS and GI-WAXS
Nazmul Hasan, Christian Fuchs, Christian Schwieger, Karsten Busse, Jörg Kressler
- Janus swimmers in heterogeneous activity fields
Sven Auschra, Nicola Söker, Viktor Holubec, Paul Cervenak, Frank Cichos, Klaus Kroy
- Effects of noise-induced coherence on the fluctuations of current in quantum absorption refrigerators
Viktor Holubec, Tomáš Novotný

- The inelastic chain ensemble model for semiflexible polymer networks
Constantin Huster, Klaus Kroy
- Electron irradiated elastin/collagen gels
Nils Wilharm, Wolfgang Knolle, Florian Ott, Annette Beck-Sickinger, Mareike Zink, Stefan G. Mayr
- Actin stress fiber dynamics in spatially confined cells
Andreas Müller, Tilo Pompe
- Correlated single molecule twist and fluorescence measurements on CRISPR-cascade
Pierre Aldag, Julene Madariaga, Inga Songailiene, Virginijus Siksnys, Ralf Seidel
- High resolution measurements of branch migration in Holliday junctions
Sebastian Belau, Ralf Seidel
- The influence of nucleotides on the long range diffusion of EcoP15I along DNA
Martin Göse, Jasmina Dikic, Fiona Diffin, Mark D. Szczelkun, Ralf Seidel
- Towards high-throughput profiling of CRISPR off-target activity
Shikhar Gupta, Saurabh Raj, Ralf Seidel
- Modelling DNA-strand displacement reactions in the presence of base-pair mismatches
Patrick Irmisch, Ralf Seidel
- Single-molecule insight into DNA end resection during eukaryotic dsDNA break repair
Kristina Kasaciunaite, Fergus Fettes, Maryna Levikova, Petr Cejka, Ralf Seidel
- High speed twist and torque measurements using DNA origami levers
Dominik Kauert, Ralf Seidel
- Probing conformation and oligomerization of the BLM helicase during repetitive unwinding using combined fluorescence and force spectroscopy
Felix E. Kemmerich, Dina Grohmann, Ralf Seidel
- Synthesis of nickel nanoparticles using DNA origami molds
Ulrich Kemper, Jingjing Ye, Ralf Seidel
- Kinetics of branch migration processes
Jonatan Meiske, Ralf Seidel
- A DNA origami and layer-by-layer hybrid carrier
Florian Scheffler, Mandy Brueckner, Jingjing Ye, Ralf Seidel, Uta Reibetanz
- Interaction of neuronal cells with electrode materials
Alice Abend, Chelsie Steele, Mareike Zink
- Investigation of pig retina mechanics with a self-designed tissue stretcher
Kantida Juncheed, Bernd Kohlstrunk, Sabrina Friebe, Solveig Weigel, Stefan G. Mayr, Andreas Reichenbach, Mareike Zink
